Requirement:

The Crossrail project is the biggest construction project in Europe, with over 7,000 people working on constructing a new rail link under the busy streets of London. Some of the heavy duty drilling took place in relative proximity to residential areas, and as a precautionary measure, it was decided to apply safety window film to properties in Whitechapel, E1, London.

Solution:

100 Micron safety film is a clear film that when professionally installed brings glazing up to safety standard, meeting the BS EN 12600 glazing standard. This safety film will ensure that if the glass breaks, it does so in a safe fashion, preventing any sharp shards falling in on themselves.

Safety film is suitable for both internal and external application, with an internal application resulting in a longer effective life. To ensure maximum efficiency it was decided that the film should be applied internally. The clear nature of the film ensures that the safety standard would be met without sacrificing view, an important consideration for residential properties.

Installation:

The Window Film Company were engaged to fit safety film to the windows of over 100 apartments at Kempton Court in London. To minimise disruption, The Window Film Company made pre-arranged appointments and carried out each fitting at a time and date most suitable for every resident. Each installation was carried out by a fully qualified two man team.

Film Choice 100 Micron Safety Film

Quantity Applied to over 100 residential properties

Print Carried out over three month period

Installation Internal application by two man team
